PLASTIMARK

Plastimark® was founded in 1995 with the aim of innovating and improving the tools that have always accompanied our daily shopping.

Its baskets and trolleys offer an innovative proposal to both Retailers and their customers.

From the beginning, the company has set itself apart by producing products of high aesthetic impact, quality and functionality, the result of a process with a distant origin whilst retaining close ties with the philosophy of the group to which the company belongs, Giordano Holding. A family-run Italian and Piedmont company, which has always been committed to having not only a successful entrepreneurial itinerary, but prior to that, a responsible and ethical commitment, from a viewpoint of sensitivity to the environment and the social context.

The use of plastic as a key element of its activity, due to its unrivalled technological and aesthetic properties, does raise major challenges and with it a commitment that do not call for neglect but to be tackled through concrete arguments and responsibilities by stressing the differences, the opportunities and the advantages of this precious resource.

STAGES OF A SUCCESS

Many achievements have characterised the Company's historical progress and development as well as its offer:

- 1997 birth of the first trolley made fully of plastic in Europe, Misterdolly
- 1998 opening of the first supermarket with Plastimark® trolleys
- 2001 fine-tuning of a new design, with the development of Duka and Twiga
- 2014 market launch of the Hybrid line
- 2018 establishment of Plastimark® France
- 2019 launch on the market of the new one-frame plastic trolley Pleasy

Achievements reached thanks to a focused and precise Research & Development policy, aimed at optimising the proposed solutions, already with a focus on imagining, and then implementing the subsequent ones.

GREEN ETHICS

As its very name suggests, since the birth of the underlying entrepreneurial idea Plastimark® has imagined and utilised plastic as the essence of its offer, the fruit of a thoughtful assessment from multiple perspectives, not just economic, technological and aesthetic, but ethical as well. Plastic, in fact, represents one of the pillars of current civilisation: we only have to think of its countless fields of application, from medicine to transport, from textiles to the domestic context.

What makes the difference vis-à-vis some recent objections is not the material in itself, but the conscious and responsible use thereof, a rule that should actually apply to any resource on the planet.

Given this vision, Plastimark® has set its own ethical code of conduct:

- on the exclusive use of 100% recyclable materials
- by offering its customers the possibility of returning the product at the end of its production life in order to insert it in the production circuit of new objects, thereby prolonging the economic life of the raw material and reducing the overall environmental impact
- on powering its own factory exclusively by electricity independently produced by non-fossil fuels.

Long economic life, recycling, modularity, weight reduction, no dispersion into the environment and green energy enable Plastimark® products to ensure a sustainability far in excess of that of conventional materials, representing therefore not merely a “nice” functional solution, but a thoughtful strategic choice as well.

MATERIALS

The generic definition of plastic, in fact, hides within its folds a practically limitless potential of technological and functional solutions.

Any item of the Plastimark® range is produced with a blend of raw materials that makes it into a concentrate of aesthetics, mechanical resistance, longevity and resistance both mechanical and atmospheric.

Each compound encompasses sophisticated qualities of the most disparate nature, linked to specific biochemical properties or to ethical and natural values, always fine-tuned thanks to consolidated collaborations with the world's largest companies in the chemical sector.

Therefore here are the following additions to plastic: anti-UV stabilisers, glass fibre, pigments, specific additives that break down the surface bacterial load, wood fibre (strictly from FSC®- certified forests) and other things as well.

The last phase allows us the possibility of producing products (baskets, trolleys and pallets) in recycled plastic material specifically characterised by their black colour.

DESIGN AND COMFORT

The line of Plastimark® trolleys gathers the best skills and creativity of their country of origin, exalting and representing the best of “Made in Italy”.

A captivating design, conceived for some models by internationally renowned Italian designers, a rainbow of colour solutions, extraordinary lightness, noiselessness, ergonomics and functionality, offering the sales outlet with a higher and pleasantly unexpected value across all age groups.

TECHNOLOGY

The technological applications connected to the shopping trolley become more numerous and functional when applied to the Plastimark® range.

Besides supporting wheels with self-locking anti-theft devices and door-mounted scanner, it is in fact structurally more suitable for the application of further accessories and new technologies.

Right from the start Plastimark® products are designed to be fully compatible with RFID technology, being able to count on the undeniable advantage provided by plastic not to interfere with the electronic reading of the label, something more likely to occur with metal trolleys ("Faraday cage" phenomenon).

SAFETY AND PERFORMANCE

Plastimark® trolleys and baskets, besides complying with European laws and regulations, which are already among the strictest in the world from a safety viewpoint, are for some models additionally and duly tested for compliance by one of the most qualified certification bodies worldwide: TÜV Rheinland Group (Germany), a qualified and conclusive independent endorsement of reliability and safety.

EXPERIENTIAL DIFFERENCE

The characteristics of the material are what intrinsically gather the experiential difference offered by the Plastimark® range.

A basket of limitless colours, a trolley of markedly superior lightness, comfort and noiselessness, the extensive possibilities of customisation and identifying recognition of the sales outlet, provide new cues and several alternative possibilities to retail marketing.

Colour is the focus of this strategy: it can match the store furniture and confers an atmosphere of warmth to the sale outlet fully in line with the image and the product sector.

Even shades and placement of the logo in unconventional positions are highly appreciative elements, proving to be far more visible to users.

The experiential picture is completed by the trolley and basket versions suitable for transporting small animals, for a *pet friendly* shopping.

MODULARITY

In the Plastimark® range, modularity is synonymous of cost effectiveness. Trolleys, baskets, pallets and accessories already constitutionally solid and durable, thanks to their simple and intuitive design and assembly reduce the after-sales costs, since maintenance can be carried out by internal staff. Each individual part can be replaced directly inside the sales outlet without any external interventions while retaining full integrity and original functionality, unlike what happens with products made of other materials. Apart from offering higher user comfort, the superior lightness extends the life of the wheels, further reducing after-sales costs.

STRENGTH: THE WHEELS

The plastic wheels equipped with precision watertight ball bearings drastically reduce noise and wear and tear and all those used for the plastic line are of quick release type.

LC quick release

PREMIUM quick release

FULL PLASTIC TROLLEYS

The FULL PLASTIC line thoroughly encompasses the essence of the Plastimark® concept.

Made entirely in plastic, maximising the potential of customisation and coordination with branding, signage and furniture, concentrating the strengths of the material: lightness, cost effectiveness, modularity, noiselessness, resistance to atmospheric agents.

The design completes this versatility, with captivating and constantly novel lines, to better enjoy shopping.

Fully recyclable and made up of a complete and diversified range, the FULL PLASTIC line combines in the best way with the green philosophy and an aware use of resources.

PLEASY 100 lt

Design by *ma li*

Earmarked for small-to medium-sized sales areas, given its accurate design and technical planning ability PLEASY fully represents the innovative turning point for the shopping trolley. Conceived as an ultra-light product, it is shaped as a single screw-less block, made entirely in plastic material. Its accurate ergonomics proves to be especially comfortable for users. Pleasy is noiseless and easy to maneuver from all sides. It combines moderate size and a loading capacity of as much as 100 litres.

Trolley of moderate size with excellent portability and easy to use, born out of the desire to better satisfy the needs of small shops.
An essential characteristic is the reduced width, suitable for narrower aisles and cashier barriers.
The basket develops vertically to reach a loading capacity of 110 litres, enabling a comfortable shopping even in sales outlets with limited spaces.

The structure, the design, the features are those of our historical articles; the essential difference is the depth of the basket, which is particularly reduced here. This solution allows the trolley to be emptied more easily avoiding uncomfortable postures, and makes the trolley lighter, so that it is easier to handle and more practical. KEITA is recommended for handling goods inside, garden centres or DIY stores. It is especially suitable for use by elderly and disabled persons.

The TWIGA plastic trolley stemmed out of the desire to satisfy the needs of medium-sized shopping areas. The loading capacity of 150 litres makes it suitable for supermarkets. Its lightness makes it easier to handle, as well as being particularly noiseless. It ensures therefore an optimal comfort for users and full satisfaction of clients' needs.

BASKETS AND SYSTEMS

The Plastimark® BASKETS are produced with recyclable or recycled plastic: their production and recycling process minimise the environmental impact, harmonizing innovative design with robustness and reliability.

Safe, light, practical, ergonomic and easy to sanitise, they help to sustain the weight of the shopping in the best way, facilitating a correct posture.

The FURBO SYSTEMS, with FURBO PLASTIC and FURBO HYBRID lines, are designed to best adapt to any type of sales outlet, consistently providing the most fitting, practical and intelligent solution for small- to medium-sized sales areas. Agile and easy to handle, they occupy very little space and satisfy user and retailer requirements.

SPEESY (45 lt)
= FURBO 78 lt

Combined with the wide range of Plastimark® baskets, the KERY structures make up the FURBO SYSTEM, conceived as a way of answering any need of the sales outlet. A flexible solution, practical and intelligent for small- to medium-sized sales areas thanks to its agility, easy manageability and minimum cluttering space.

Kery

DOGO

The system for the little ones

Capacity: 600 mm
Width: 670 mm
Height: 550 mm
Nesting capacity: 95 mm
Weight: 5.40 kg

1 wheel Ø 80 mm (pivoting wheel)
2 fixed rear wheels Ø 80 mm

The DOGO structure combined with the TYKO basket is the likeable proposal for children's "shopping".

FURBO HYBRID

An ultra-compact and easy-to-handle modular solution that can be used in a number of volumetric combinations from 22 to 78 litres, combining the whole Plastimark® baskets range. The MULTI structure is made in ultra-light metal with high-quality electrolytic zinc coating, in a variety of colour solutions. It is equipped with Ø 80 mm pivoting wheels with anti-trace rubber tread and anti-dust protection. The ergonomic polypropylene handle can be customised as regards colour and logo. Combined with the baskets range, the MULTI structures make up the FURBO HYBRID SYSTEM.

PALLET

Consisting in a single mono-block and resistant to both low and high temperatures (from -20 to + 100 °C), Plastimark® PALLETS are the most robust, hygienic and ecological alternative to the conventional pallet and represent a significant step ahead to customise the sales outlet and enhance the goods on display.

Equipped with anti-overturning crossbeams, the PALLETS are manufactured with materials suitable for contact with foodstuffs and 100% recyclable.
